- USB cable

WiFi Travel Reader Pro

Watch and share videos or photos wirelessly and charge your mobile device!

DESCRIPTION

Watch at home or on the go videos and photos wirelessly at your tablet or smartphone via the Android/Apple app. Simply connect your USB-stick or SD-card to the EM4620 WiFi Travel Reader Pro. This compact WiFi Travel Reader Pro also functions as a WiFi hotspot and WiFi repeater. Use the EM4620 everywhere because of its internal battery. This battery operates as a power bank too, to charge your smartphone.

Expandable storage with a SD-card and USB-stick
The memory of tablets and smartphones often is limited. Expand the storage of your smartphone and tablet with the EM4620 WiFi Travel Reader Pro. Download and upload all your files from an USB-stick and SD-card wirelessly to your tablet and smartphone via the WiFi Travel Reader Pro. In this way you can back-up your files too. This is very easy with the help of the free Android/iOS app.

Watch your pictures directly
Use the EM4620 for watching your freshly made pictures directly on your Android/iOS tablet and smartphone. Insert the SD-card in the WiFi Travel Reader Pro. Watch and share your pictures immediately with others via the free app.

Portable: take the WiFi Travel Reader Pro along with you
Take the WiFi Travel Reader Pro easily along thanks to its compact design. You do not need an external power source, because the EM4620 WiFi Travel Reader Pro has an internal battery. When your smartphone runs out of power, you can charge your smartphone with the internal rechargeable power bank of the EM4620. Charge the internal battery of the EM4620 via the micro USB- port at the reader itself.

WiFi hotspot: share your Internet connection
On top of all the above mentioned features, the EM4620 still covers more functions. The function switch at the EM4620 makes sure that the internal battery is used in the right way. You can select which function you want to use: power bank, router and off. When you have access to Internet via a wired connection only, the EM4620 creates a WiFi hotspot. Just plug the UTP-cable in the WAN-port whereupon the EM4620 creates a WiFi hotspot. Share this connection with other devices at the same time.

WiFi repeater: increase your wireless network coverage
The WiFi Travel Reader Pro increases the coverage of the existing wireless network. In this way you will also have wireless Internet when you are just out of reach of your standard wireless Internet connection.
