

### Features

- Voice Clarifying Circuitry® makes television dialogue easy to understand
- Digital connectivity with Dolby, SRS, and PCM compatibility
- Two Headsets for couples or for extended viewing
- Additional LEDs offers stronger transmission
- Sleek and compact design with a large easy-to-use volume dial

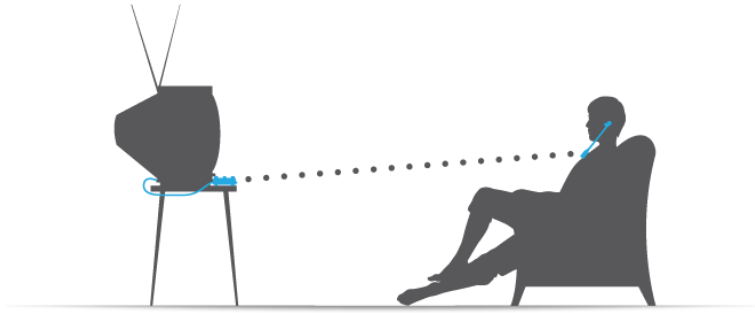

### Overview

With more than twice the number of light emitting diodes, the 5.0 Dual Digital is more than twice as powerful than any other TV Ears wireless TV listening system. This product comes with two 5.0 Headsets for listening any time, or with anyone, as well as a Dual Digital Transmitter that has the most powerful digital audio output that we have to offer. Digital connectivity, via an optical digital audio cord, and compatibility with Dolby Digital, SRS, and PCM products certifies that this TV listening device will successfully install to any television, cable box, satellite box, or home audio system that you currently have.

The 5.0 Headset has an all new Snap-Fit Charging mechanism ensures a perfect charge every time. Its ergonomically angled and background noise reducing foam ear tips direct unhindered, crystal clear audio directly down the ear canal for the best TV listening experience ever.

# How it works

The transmitter is placed on a flat surface facing the seating area and is connected to the audio out port on the back of the television, satellite or cable box. The transmitter then sends audio wirelessly to the speaker system. Volume is controlled independently from the TV on the Speaker.

## Technical Data

Transmission Type	Infrared, Mono
Audio Frequency Response	20 - 20,000 Hz
Transmission Frequency	2.3 MHz
Max SPL	125 dB
Headset Dimensions (H x W x D)	8" x 5.4375" x 0.6875"
Digital Connectivity	Dolby, SRS, and PCM product compatibility
Transmitter Dimensions (H x W x D)	1.4" x 4.12" x 3.625"

## Package Contents

- Wireless 5•Two 5.0 Headsets (wireless and rechargeable)
- 5.0 Dual Digital Transmitter (holds and charges 2 headsets)
- Rechargeable battery (comes pre-installed in the headset)
- Optical Digital Audio Cord
- Auxiliary Audio Cord
- Analog Audio Cord
- Power Supply
- Additional headsets can be purchased separately

## Voice Clarifying Circuitry®

What makes TV Ears products stand out above all other TV listening systems is a proprietary technology called Voice Clarifying Circuitry®. An advanced microchip in the transmitter captures the audio signal and amplifies the human speech frequencies above the background noise so that spoken words are clearly audible. This basically boosts the sound of the dialog. Unlike lesser analog models that merely make all sounds louder, TV Ears' products amplify voice pitch frequencies above other sounds, so words are easier to discern. The words seem to jump out of the track, making even whispers and accents understandable.
