

### Features

- **Voice Clarifying Circuitry®**
- **Television and headset volume function separately**
- **Ultra lightweight wireless headset with improved bow arms, docking and tone control**
- **Ergonomic, background noise reducing foam ear tips**
- **2 Year Warranty & Local customer service**

### Overview

The 5.0 Analog System uses our latest voice clarifying headset system. This TV listening system actively clarifies and amplifies speech and dialog while lowering background noise so you can actually hear what's going on. No more rewinding parts of the movie or asking the person next to you what was just said. You'll hear every word.

The 5.0 Analog also allows you to listen to your television without turning up the volume on the TV. This gives other people in the room the ability to watch TV with you while you listen at your own volume. Simply connect the transmitter to your TV, cable box, or satellite box equipped with analog audio out ports and you're ready to go. For our most basic wireless TV listening device, the 5.0 Analog makes TV listening enjoyable again.

# How it works

The transmitter is placed on a flat surface facing the seating area and is connected to the audio out port on the back of the television, satellite or cable box. The transmitter then sends audio wirelessly to the headset worn by the user. Volume and tone adjustments are available on the headset for creating perfect dialog clarity. TV Ears works separately from the TV volume (so the TV can be turned down or muted) and is compatible with any television.

## Technical Data

Transmission Type	Infrared, Mono
Audio Frequency Response	20 - 20,000 Hz
Transmission Frequency	2.3 MHz
Max SPL	125 dB
Headset Dimensions (H x W x D)	8" x 5.4375" x 0.6875"
Transmitter Dimensions (H x W x D)	1.4" x 4.12" x 3.625"

## Package Contents

- 5.0 Headset (wireless and rechargeable)
- 5.0 Analog Transmitter (holds and charges 2 headsets)
- Rechargeable battery (comes pre-installed in the headset)
- Auxiliary Audio Cord
- Analog Audio Cord
- Power Supply
- Additional headsets can be purchased separately

## Voice Clarifying Circuitry®

What makes TV Ears products stand out above all other TV listening systems is a proprietary technology called Voice Clarifying Circuitry®. An advanced microchip in the transmitter captures the audio signal and amplifies the human speech frequencies above the background noise so that spoken words are clearly audible. This basically boosts the sound of the dialog. Unlike lesser analog models that merely make all sounds louder, TV Ears' products amplify voice pitch frequencies above other sounds, so words are easier to discern. The words seem to jump out of the track, making even whispers and accents understandable.
